- Manage Tags
- Capture/Import Photos
- Add/Modify/Delete Extra Data
- Enroll Morpho Fingerprints
- Enroll Hikvision Fingerprints & Faces
- Manage Access Permissions
- Company & Department Management
- Access Group Management
- Reporting

Manage your SACS Tag Holders from anywhere, at any time. With SACS Fusion, managing Tag Holders is simple and flexible.

Whether you're at the office, working from home, or on the move, you can manage users and update access permissions in real time.

Our cloud-based platform makes administration effortless. Add new users, create companies and sites, adjust access permissions, and generate reports all from a single interface accessible from anywhere.

From a single building to multiple locations, SACS Fusion provides complete control over user management, giving you the flexibility and visibility needed to manage your security system efficiently.

SACS Fusion is essentially a **cloud management layer** that sits above (or alongside) traditional SACS installations.

Instead of using only SACS Windows -based Applications available on the local LAN/WAN, SACS Fusion allows remote administration via web interface.

It typically relies on an **edge device or local API service** to handle on-site database updates and data retrieval.

Log into SACS Fusion from anywhere (Browser, Tablet or Phone) and select the site you want to manage. End users only log in to their own site.

Any changes made are immediately communicated to the site via edge-device and stored in the site database and controllers.
